Maybe I have the synax wrong but Unlimited DOES NOT work! I am upping the disknodes every time it crashes when it hits the limit every month or so. I am running zoneminder and it seems to hit that when I get alot of action on this server VM container. I need something that is a permanate fix. There has to be anouther solution? Its almost as if it just fills up slowly and never gets to become less.

```
root@HN:~# vzctl set 200 --disknodes unlimited --save
Bad parameter for --disknodes: unlimited
root@HN:~# vzctl set 200 --disknodes unlimited:unlimited --save
Bad parameter for --disknodes: unlimited:unlimited
```

If someone knows how to set this to unlimited let me know.

curx wrote on Sat, 19 September 2009 16:00Hi,

see man page: "Disk quota parameters" and "Resource limits"

```
# vzctl set <CTID> --disknodes <soft:hard> --save
```

in your case, as an example

```
# vzctl set 200 --disknodes 400000:440000 --save
```

Btw, for disableing vzquota, inodes you can set soft and hard to "unlimited"

Bye,
Thorsten
