Maybe I have the synax wrong but Unlimited DOES NOT work! I am upping the diskinodes every time it crashes when it hits the limit every month or so. I am running zoneminder and it seems to hit that when I get alot of action on this server VM container. I need something that is a permanate fix. There has to be anouther solution? Its almost as if it just fills up slowly and never gets to become less.

root@HN:~# vzctl set 200 --diskinodes unlimited --save Bad parameter for --diskinodes: unlimited root@HN:~# vzctl set 200 --diskinodes unlimited:unlimited --save Bad parameter for --diskinodes: unlimited:unlimited

If someone knows how to set this to unlimited let me know.

curx wrote on Sat, 19 September 2009 16:00Hi,

see man page: "Disk quota parameters" and "Resource limits"

# vzctl set <CTID> --diskinodes <soft:hard> --save

in your case, as an example

# vzctl set 200 --diskinodes 400000:440000 --save

Btw, for disableing vzguota, inodes you can set soft and hard to "unlimited"

Bye,

**Thorsten**
