Subject: IP assigning to container

I found a command on the OpenVZ wiki, and I would like to know more about it.

The command is:

```
vzctl set CTID --ipadd a.b.c.d --save
```

So, does this work with PUBLIC IPs? For Example I have 5 IPs assigned to my dedicated server, and I want to create 4 Containers each having different Public IP. So, only this command is needed or something more?

Thanks in advance.
