Subject: Question regarding OStemplate setup.

Hi All,

I am trying to setup OVZ for the first time using Debian 3.1 (sarge) as the host OS. I've been following the instructions found via this link:

http://howtoforge.com/openvz_debian_vps

All seems to have gone well except for setting up OStemplate Cache to setup a VPS. After my install of OVZ I had expected to find this path: /vz/template/cache, however, it did not exist. Note: /vz does exist.

I am trying to create the first VPS using a debian OStemplate.

However, I did find this path that was already created: /var/lib/vz/template/cache

But the doc does not show/reference anything about the path: /var/lib/vz/template/cache...

Would appreciate if anyone can clarify what I might be missing or what might have gone wrong - Any other comments/suggestions appreciated!

-Joe
