Subject: Re: Which fles contains IPs?
Posted by dipps on Sun, 02 Mar 2014 03:13:30 GMT

vzctl does edit startup files inside the container as well as /etc/vz/VEID.conf. really, it's the easy way to do it.

vzctl set VEID --ipdel OLD_IP --save
vzctl set VEID --ipadd NEW_IP --save

If you must edit files to change the IP, it will probably work if you shut down the VE, edit IP in etc/vz/VEID.conf, then start the container. But please test it.

For websites and named, of course you'll have to edit the configs, vzctl doesn't do that
