I am no expert, but after you allow ip's to access your port 80:

```
iptables -A INPUT -s 192.168.4.0/24 -m state --state NEW -p tcp --dport 80 -j ACCEPT
```

```
iptables -A INPUT -s 70.122.X.X -m state --state NEW -p tcp --dport 80 -j ACCEPT
```

```
iptables -A INPUT -s 192.168.0.16/28 -m state --state NEW -p tcp --dport 80 -j ACCEPT
```

You need to block every other host from it:

```
/sbin/iptables -A INPUT -i eth0 -p tcp --dport 80 -j DROP
```

Adjust your eth to your server.
