Hi,

@Daniel15:

The kernel-images from [debian.systs.org](#) are using the kernel-configs from [openvz.org](#).

The configs are stored in the kernel-source under `./configs`
e.g. `-smp` ones

Which kind of network card do you use, the driver of 8139 is build as a kernel module.

```
CONFIG_8139CP=m  
CONFIG_8139TOO=m  
CONFIG_8139TOO_PIO=y  
CONFIG_8139TOO_8129=y
```

So can you you explain, whats going wrong ?

Regards,
Thorsten
