Centos 6 node (2.6.32-042stab068.8), Centos 5 container (used centos-5-minimal image). It worked, then it was stopped and now I'm trying to start it.

Container is starting and I can enter using 'vzctl enter' command, but I see startup scripts from /etc/rc.d hang, they start process and don't stop. I need to kill them, and then next script starts, I need to kill... and so on.

How can I to fix it and how can I debug it?
