This seems to be working for me:

HN: centos 6.4, 2.6.32-042stab078.28
Container: debian 7.4

Container has --capability sys_time:on and runs openntpd - I don't need all of xntpd. It's keeping in sync and the CT updates time on the HN.

The HN time was pretty close to start with, so to tell if it was working, I manually set it a minute wrong. 2 days later it was in sync again.

Paparaciz, interested why you think this is the wrong way to go. So far it does all I need.
