Subject: Unable to enter VE
Posted by whonch on Sat, 22 Mar 2014 21:21:51 GMT

I created a new virtual machine using the debian 7 x86 template, but I am totally unable to enter this VE using the command "vzctl enter VEID". Other virtual machines, including Debian 6 x86 work fine.

I can only run commands using "vzctl exec VEID", and it seems that daemons inside the VE do not run at startup (such as SSH).

Is this a know issue? How can I fix it?

Thanks in advance.
