
Subject: After upgrade, host reboots when trying to start container

I just did a yum update to get:

vzctl version 4.6.1

Linux vz.home.jwp.se 2.6.32-042stab085.20 #1 SMP Fri Mar 21 19:07:05 MSK 2014 x86_64
x86_64 x86_64 GNU/Linux

Up until this upgrade everything was working smoothly. However, now I can't start containers. The host reboots as soon as I do a vzctl start.

Since the host is remote, I don't see if there are any console messages, but there is nothing in the kern log, which makes me believe it's an instant freeze+reboot.

Please advise.
