I suspect that this threads in mailing list will help your problem:

[https://lists.openvz.org/pipermail/users/2014-March/005532.h tml](https://lists.openvz.org/pipermail/users/2014-March/005532.html)

[https://lists.openvz.org/pipermail/users/2014-March/005528.h tml](https://lists.openvz.org/pipermail/users/2014-March/005528.html)

[https://lists.openvz.org/pipermail/users/2014-March/005487.h tml](https://lists.openvz.org/pipermail/users/2014-March/005487.html)

As I understood you have to remove openvz kernel and install again it. sorry, I didn't readed this messages in mailing list carefully because I don't use debian.
hope it helps.
