whonch wrote on Wed, 09 April 2014 09:58Maybe I am using an old version of Openvz in my physical server?
How about actually looking at the versions etc. and telling us?

Copy paste from the front page of the forum: "Please always report your kernel and tools version."

Besides that, I suggest reporting:
- your physical server OS and OS version
- the list of the OS templates that work for you and those that don't, please also mention what exactly doesn't work.
