You are correct, it was an easy and obvious fix.
I searched before but it was a long day and my brain was tired.

The fix was in: /etc/yum.repos.d/CentOS-Base.repo

I added

exclude=kernel*

Under the [base] and [updates] repos.

I've done this a million times, must have missed the obvious here.

Sorry for the lame post!

Thanks for your help.
