kernel: 2.6.18-371.6.1.el5.028stab112.3

I can't reproduce problem

maybe you try to resume ct which was suspended from other server with rhel6 based kernel?

I recommend on rhel5 based server after update to vzctl 4.7 make 2 changes in /etc/vz/vz.conf:

```
CONFIGFILE="basic"
```

```
## Filesystem layout for new CTs: either simfs (default) or ploop
```

```
VE_LAYOUT=simfs
```
