you have to know how to reproduce this, than submit a bug report.

All who have this problem should report exact kernel, os, tools versions. both HN and CT.

maybe something specific in CT?

maybe something in all setup?

currently I don't have such problem with

1.

2.6.32-042stab088.4

vzctl version 4.7

HN: Centos6

CTs: Centos6

2.

2.6.32-042stab088.4

vzctl version 4.7.2

HN: Centos6

CTs: Centos5
