Subject: CT cannot access to LAN
Posted by decibel83 on Fri, 13 Jun 2014 08:47:14 GMT

Hi.

My CT0 is connected to the LAN through eth1.
The CT has a veth bridged with eth1.
CT can access to the IP address of CT0's eth1, but cannot access to other hosts in the LAN.
The strange thing is that other hosts in the LAN can access to CT.
There are no firewall rules in CT0, CT or other hosts, all is ACCEPT and no iptables rules at the moment.
CT0 can access to other hosts in the LAN of course (so no physical connection problems).

ip_forward is enabled on CT0.

Could you help me please?
