Hello i read scripts on openvz.org/Ploop/Backup

Quote:

```
vzctl snapshot $CTID --id $ID --skip-suspend --skip-config
```

```
# Perform a backup using your favorite backup tool
```

```
# (cp is just an example)
```

```
cp $VE_PRIVATE/root.hdd/* $BACKUPPATH/
```

```
# Delete (merge) the snapshot
```

```
vzctl snapshot-delete $CTID --id $ID
```

Why merge run after cp? Also, i can copy only root.hdd, without snapshot if snapshot already merged and deleted?
