## Subject: Re: Future of OpenVZ and ploop?
Posted by devonblzx on Tue, 24 Jun 2014 19:40:08 GMT

I personally think ploop makes OpenVZ better.  Sure, some cases simfs is nice, but ploop makes management from the host node so much easier with the image file and snapshots, makes containers independent from the host's filesystem limitations and quotas, and eventually will lead to containers being able to easily run different file system types.

Maybe you can explain further what the disadvantages of ploop are?
