Hey guys,

OS:

Distributor ID: Debian

Description: Debian GNU/Linux 7.5 (wheezy)

Release: 7.5

Codename: wheezy

Kernel:

2.6.32-openvz-042stab084.17-amd64

VZ:

vzctl 4.7.2-1

In some cases the `/var/lib/vz/root/$CTID` and the `/var/lib/vz/private/$CTID` directories are not being removed after an instance has been destroyed, No errors in the `vzctl.log` to indicate any reason for this. It does not happen always but probably about 40% of the time.

Not sure if anyone else has seen this behavior and if this is a bug or not.
