Hey guys,

OS:

Distributor ID: Debian

Description: Debian GNU/Linux 7.5 (wheezy)

Release: 7.5

Codename: wheezy

Kernel:

2.6.32-openvz-042stab084.17-amd64

VZ:

vzctl 4.7.2-1

In some cases the /var/lib/vz/root/\$CTID and the /var/lib/vz/private/\$CTID directories are not being removed after an instance has been destroyed, No errors in the vzctl.log to indicate any reason for this. It does not happen always but probably about 40% of the time.

Not sure if anyone else has seen this behavior and if this is a bug or not.
