
Subject: disk size becomes weird after set disk space many times

Posted by [nethubonline](#) on Fri, 08 Aug 2014 05:10:07 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi all,

We just started to use ploop, and testing on "disk space". We found that the disk size will become smaller after setting disk space for many times.

Versions:

vzctl-4.7.2-1.x86_64

e2fsprogs-resize2fs-static-1.42.11-1.ovz.x86_64

vzquota-3.1-1.x86_64

ploop-lib-1.11-1.x86_64

vzstats-0.5.3-1.noarch

ploop-1.11-1.x86_64

vzctl-core-4.7.2-1.x86_64

vzkernel-2.6.32-042stab092.3.x86_64

Container is CentOS 6.5 x64

Below are the commands and outputs that after a new ploop container created. The initial disk space is 50GB. You can see the first several try that setting to 20GB/30GB/40GB are successful, and then at last setting to 20GB/10GB, "Size", "Used" are not correct. Restart container won't help.

Is it bug of OpenVZ/vzctl/ploop or OS related?

```
[root@openvz ~]# vzctl exec 101 df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/ploop40700p1 50G 813M 46G 2% /
none            512M 4.0K 512M 1% /dev
none            512M  0 512M 0% /dev/shm
```

```
[root@openvz ~]# vzctl set 101 --disk space 10G --save && vzctl exec 101 df -h
