I have noticed the creation of a few directories under /vz/private (and /vz/root too of course) that are not directly related to VPSes. They are 100001, 100002, 100003, and 100004. Oddly enough, I have 4 VPSes on the machine in question, numbered 101 - 104.

When I originally installed VPSes 101 - 104, /vz was on the / partition and it was getting pretty full... so I ended up moving /vz to another partition where there was more space. Oddly enough, some stuff was left behind after the move in /vz so I just named that /vz-old (just in case). Then I symlinked /vz to point to its new location. It was at this point that the 10000n directories started showing up.

I have a feeling it was my own fault as a result of moving the /vz data. Any way to fix this? I know it isn't broken... it still works and everything... I would just like to get rid of the /vz/10000n directories.
