Subject: Re: Unable to start init, probably incorrect template error
Posted by vztester on Wed, 13 Aug 2014 21:17:22 GMT

I helped someone with this same issue who was trying to use a 64-bit template on a 32-bit kernel (impossible of course). They didn't realize that 32-bit on 64-bit isn't the same setup and incompatible.

If you're using a confirmed working template from the OpenVZ website the issue is probably architecture (eg. using 64-bit templates on a 32-bit kernel).
