---

Hi guys,

I install OpenVZ on Debian, it is running ok.

however, I encounter some issues when I did the following.

1. I set up a NFS server (hostNFS, ip=192.168.203.147), and exports in /etc/exports:  
/vz/private 192.168.203.0/24(rw,sync,fsid=0,crossmnt,no\_subtree\_check,no\_root\_squash)  
the partition /vz is ext4 format.

2. on the OpenVZ machine, I mount as following in /etc/fstab:

```
192.168.203.147:/vz/private /var/lib/vz/private nfs rw,sync,hard,intr 0 0
```

then I create and start a Container,

I have the errors:

----

```
Setting maximal mount count to -1
```

```
Setting interval between checks to 0 seconds
```

```
Creating balloon file .balloon-c3a5ae3d-ce7f-43c4-a1ea-c61e2b4504e8
```

```
Error in reread_part (ploop.c:1096): BLKRRPART /dev/ploop30294: Device or resource busy
```

```
Mounting /dev/ploop30294p1 at /var/lib/vz/private/304.tmp/root.hdd/root.hdd.mnt fstype=ext4  
data=""
```

----

the container can start up despite of this error.

But can anyone help solve it?

thanks!
