Hi,

a make a some steps. And now when I switch one node in Standby mode, the all resooource switch on second node. After switch back, all resource get normaly in primary node. Bad if I reboot the primary node, the VZ machine create a error as: res_ManageVE_203_stop_0 (node=mars, call=57, rc=1, status=complete): unknown error (thi It's the log from crm status).

Any Idea?
