
Subject: Copy file from VE0 into mounted VE with Ploop

Hello,

I have several VEs running. The old ones have SimFS where it is no problem to copy a file from the VE0 to a VE when the virtual machine is running.

```
cp /file/from/master /vz/private/XXX/path/into/ve
```

That works for me over a view years. Now I have some machines with ploop images and here I cannot do this. I read the documentation but the "ploop copy" command only copies the complete ploop image. The VE itself has no SSH, FTP or somethink like that so that I can use this. To manage the machine I use the "vzctl exec" command.

Is there a possibility to copy files into a running VE with a ploop image? I only found it on a stopped machine where I can mount the ploop.

Thanks and regards,
Tobias
