---

```
# vzctl set $CTID --quotauidlimit 20000 --save --setmode restart
```

...container should cycle:

From your cpanel container:

```
# ls -al /aquota.*
```

You should have local aquota.user/aquota.group defined here. Then:

```
# /usr/local/cpanel/scripts/quotacheck -vguma  
# /usr/local/cpanel/scripts/fixquotas
```

Check your quotas now.
