Hello,

May I ask do you guy run vzctl compact VEID on unattended cronjob automatically?

Q1) Online compact, right?

Q2) Is there any thing we need pay attention to?

Q3) Any return value I can check/lookup?

We are running CentOS 6 x64 OpenVZ kernel, but some VE are CentOS 5 x86 ploop image.

We found running a few days/weeks, some VE ploop file size is already doubled of the guest VE disk usage.

Thank you very much for your kind sharing.

Regards
George
