Hello All,

At the moment, in 2 CentOS 6 x64 OpenVZ box, I tried over 10 times - yum clean all; yum check-update

I do not find 2.6.32-042stab094.8 update available.

(I found this update vzkernel-2.6.32-042stab094.8.x86_64 around 12 hours ago, and applied to some server)

Do you have similar experience?

Thank you

Regards

George
