Subject: Re: Safe to install kernel and linux-firmware inside container?
Posted by Pascal on Fri, 19 Dec 2014 06:03:44 GMT

I bought an extra VPS just to test this. Allowing those two packages to install inside it does not appear to have broken anything. I also figured out that different repos package fail2ban with different prerequisites. While the fail2ban in epel requires ipset the one in rpmforge does not.
