---

Kernel Linux 2.6.32-504.3.3.el6.x86\_64

OS CentOS release 6.6 (Final)

with OpenVZ Web Panel

I try to start openvz but failed

/sbin/service vz start

Running kernel is not an OpenVZ kernel

And I check directory /proc/vz not found

For package kernel installed

```
# rpm -qa | grep kernel
kernel-2.6.32-431.el6.x86_64
libreport-plugin-kerneloops-2.0.9-21.el6.centos.x86_64
vzkernel-2.6.32-042stab094.8.x86_64
dracut-kernel-004-356.el6.noarch
abrt-addon-kerneloops-2.0.8-26.el6.centos.x86_64
kernel-headers-2.6.32-504.3.3.el6.x86_64
kernel-firmware-2.6.32-504.3.3.el6.noarch
kernel-2.6.32-504.3.3.el6.x86_64
vzkernel-2.6.32-042stab090.4.x86_64
```

Must I uninstall openVZ first?

To uninstall openVZ, at first search for packages installed for open vz

# rpm -qa | grep vz

These packages are most probably owned by OpenVZ.

Then rpm -e "Those packages" for eg:

rpm -e ovzkernel vzctl vzquota vzpkg vztmpl-fedora-core-4 vztmpl-centos-4 vztmpl-fedora-core-3

Then install OpenVZ again, and then restore Dump CT file?

What should I do?
