
Subject: OpenVZ Container doesn't start all processes.

I have with my OpenVZ Ubuntu container 12.04 2.6.32-042stab102.9 x86_64 x86_64 quite the similar problem how is described in Bug Report 3175.

If I boot the container, only 5 processes are starting automatically, but I can start all other processes manually.

The problem is appearing after about 1 month runtime of the container. I reinstalled the container now twice. First with Ubuntu 14.04 then with Ubuntu 12.04. Is there a way to fix the problem inside the container?
