please explain what do you mean

Quote:Upon installing SSL on main node, OVZ Kernels could not boot, message kernel panic!

you were installing openssl?

after installing openssl you rebooted node?

was new openvz kernel installed? did it booted with previous kernel version?

what OS, kernel and openvz tools you are using?

you can always buy support from parallels.

<http://sp.parallels.com/support/virtualization-suite/openvz/>
