The required kernel-firmware 2.6.32-504.8.1.el6 is inside the (not enabled) centosplus chapter CentOS-Base repo.

I believe according to some ftp mirrorlists on internet,

example: `h t t p://mirror.centos.org/centos/6/centosplus/x86_64/Packages/`

but if I enable or add option `installpkgs=kernel-firmware`,
or using yum priority's it doesn't get installed or show up as update.

`#yum list kernel-firmware`

still shows only version 3.3.el6 as latest version
