Hi,

I was pointed here, since I am running VPS on Virtuozzo with CentOS 6.

First of all let me say, that I am pretty new with linux. I search around over the internet what I can find, but sometimes I need to stop somewhere and ask.

I know that for use of quotas I need to have second level quota turned on. By information checked from my provider it is turned on:

I can not put links so...

hilfe-server . de/server4you-info/vserver-x5-ressourcen/ on vSERVER Pro X5 it says
"QUOTAUGIDLIMIT 1000".

Now I would like to make usrquota and groupquota on /home. What I need to do? as I checked my /etc/fstab,only this is inside it

```
none /dev/pts devpts rw 0 0
```

df -h gives me

Filesystem	Size	Used	Avail	Use%	Mounted on
------------	------	------	-------	------	------------

/dev/ploop19895p1	99G	592M	94G	1%	/
-------------------	-----	------	-----	----	---

none	1.0G	4.0K	1.0G	1%	/dev
------	------	------	------	----	------

So what do I need to do, that usrquota and grpquota will work for me? I am planning to install Interworx hosting panel and this panel require to set usrquota and grpquota...

Denis
