for example:

```
[root@server~]# vmstat
procs -----------memory---------- ---swap-- -----io---- --system-- ----cpu----
 r  b  swpd  free  buff  cache   si  so   bi   bo   in   cs us sy id wa
 5  2 6654616 38736 137608 1754916   0   2    1    0    1    0 16 10 59 15
```

5 running procs in this server. it has less than 5 cpus.

make sense now? how can we limit the number of running procs inside a vps.
