Subject: Re: Running procs in VPS context :: possible to limit/throttle?
Posted by HaroldB on Wed, 16 Aug 2006 15:28:36 GMT

say a vps tries to run 100 concurrent processes... can openvz limit/throttle this?

like I said earlier, setting the cpulimit lower will only increase the number of running procs because they take longer to complete.

Do you agree on this point?
