What should I have checked ? I have no idea. That problem is connected with many type of servers.

Load of disk is it ok in the moment when server hangs up, please see graph: <http://oi59.tinypic.com/358t3k5.jpg>

vz containers is created on /home part:

```
# ls -l /var/lib/vz
```

```
lrwxrwxrwx 1 root root 8 Mar 26 09:28 /var/lib/vz -> /home/vz
```

I've tried many methods and I can't find solutions on that problem
