Same with Fedora 21.

One possible fix is to modify /etc/vz/dists/scripts/redhat-add_ip.sh by adding ARPCHECK="no" in function create_config()

```
function create_config()
{
    local ip=$1
    local netmask=$2
    local ifnum=$3
    local file=${IFCFG_DIR}/bak/${VENET_DEV_CFG}:${ifnum}

    echo "DEVICE=${VENET_DEV}:${ifnum}"
    ONBOOT=yes
    IPADDR=${ip}
    NETMASK=${netmask}"
    ARPCHECK="no\" > $file ||
        error "Can't write to file $file" ${VZ_FS_NO_DISK_SPACE}
}
```
