Hello guys,

I have problem & confused about disk usage calculation..
In /vz private/101 I check it with this command

```
-----  
# du -c /vz/private/101  
-----  
4    /vz/private/101/root.hdd/root.hdd.mnt  
508745792    /vz/private/101/root.hdd  
4    /vz/private/101/etc  
508745800    /vz/private/101  
508745800    total  
-----
```

The result reach 500GB.. very BIG T_T

But inside VPS container, I check with df command show different result.

```
-----  
# vzctl enter 101  
entered into CT 101  
  
#df  
Filesystem      1K-blocks    Used Available Use% Mounted on  
/dev/ploop35891p1 504134764 182982684 300654600 38% /  
none            2097152      4 2097148 1% /dev  
none            2097152      0 2097152 0% /dev/shm  
-----
```

It's only 182GB Disk used

..anyone know why the /vz/private/101 is very large than VPS container inside??
ANYone can help me, please?
Thx
