Hi

I think I messed up with a container. I thought it had been compromissed and copied a sshd file into the container when it was stopped. After starting it doesn't work anymore. I need someone to fix it.

On the host it shows:
Container is mounted
Adding IP address(es): ...
/bin/cp: cannot stat `ifcfg-venet0:*': No such file or directory
ERROR: Unable to backup interface config files

On the container it shows (replace domain name for 'mydomain':
/vz/private/120/var/log/messages
Apr 24 03:34:18 mydomain syslogd 1.4.1: restart.

Apr 24 03:34:24 mydomain xinetd[3470]: bind failed (Address already in use (errno = 98)). service = smtp
Apr 24 03:34:24 mydomain xinetd[3470]: Service smtp failed to start and is deactivated.
Apr 24 03:34:24 mydomain xinetd[3470]: xinetd Version 2.3.14 started with libwrap loadavg

labeled-networking options compiled in.
Apr 24 03:34:24 mydomain xinetd[3470]: Started working: 2 available services
Apr 24 03:34:28 mydomain init: no more processes left in this runlevel

If it has been compromised, I need to backup the database at least to move it somewhere else.

Could someone help me with that? If there is some expert I would be willing to pay for the service.

Thanks
