
Subject: Ploop: suspend -> dump -> snapshot -> resume: is it as efficient as "vzctl snapshot <ctid>" ?

Hello!

(Please forgive my bad English)

My question is about Ploop layout.

I would like to know if "vzctl snapshot <ctid> --skip-config" can be "segmented" as follow:

- 1) vzctl chkpnt <ctid> --suspend
- 2) vzctl chkpnt <ctid> --dump --dumpfile <path_to_dump_file>
- 3) vzctl snapshot <ctid> --id <uuid> --skip-config --skip-suspend
- 4) vzctl chkpnt <ctid> --resume

- Is it efficient?
- If not, how is the right way to do it, step by step?

Thanks!
