Hi,

you've tar the ploop disk directory structure not a filesystem, you must mount the ploop to root/dir,  
tar it=build template.

```
# mount the root/ploop
vzctl mount 101
```

```
# change to ct root
cd /vz/root/101
```

```
# build template from filesystem
tar --numeric-owner -czf /vz/template/cache/ubuntu-14.04-x86_64-kurento.tar.gz .
```

```
# umount ploop
vzctl umount 101
```

```
# create new ct from build template
vzctl create ... --ostemplate ubuntu-14.04-x86_64-kurento ...
```

Bye,  
Thorsten
