Hello Curx

7x.xx.138.86 is the node ip address, the container should be using 7x.xx.139.109 as the main ip address.

I tried your suggestion with no change

```
[root@ ~]# vzctl set 115 --ipadd 7x.xx.139.109 --save
Deleting IP address(es): 7x.xx.139.109
Adding IP address(es): 7x.xx.139.109
CT configuration saved to /etc/vz/conf/115.conf
[root@ ~]# vzctl enter 115
entered into CT 115
root@ [~]# lynx -dump http //www.cpanel.net/showip.cgi
```

7x.xx.138.86

```
root@[~]# exit
logout
exited from CT 115
[root@ ~]#
```

Scott
