Subject: Re: OpenVZ Inside Access
Posted by tumtum on Fri, 22 May 2015 20:29:39 GMT

Example:

1 CT = running NGINX Reverse Proxy (CSF)
1 CT = Webserver (CSF)
1 HN = CSF / OpenVZ

With CSF Closing all ports on the Webserver CT/VM, but the NGINX Reverse Proxy can still access port 80/443 etc.
How is that possible? The ports are not closed for the cts?
