Thanks again speedbus.

I have tried launching the script manually to test it, and I get this error:

```
[root@servervps7 scripts]# sh antiload.sh
antiload.sh: line 10: [: too many arguments
```

line 10 is as follows in your script:

```
if [ $load2 -gt $maxload ]
```

What could the problem be? I love the idea of using your script!

Thanks!

Fabio
