Subject: Re: [RFC][PATCH 5/7] UBC: kernel memory accounting (core)
Posted by Alan Cox on Wed, 16 Aug 2006 16:35:31 GMT

The

+   ub->ub_parms[UB_KMEMSIZE].limit = 32 * 1024 * 1024

seems a bit arbitary. 32Mb is variously vast amounts of memory and not
enough to boot depending if you are booting a PDA or a 4096 core Itanic
box
