Subject: Re: Docker into OpenVZ container
Posted by tburazin on Fri, 19 Jun 2015 19:41:06 GMT

Hi wiuempe,
I've been successful in getting Docker to run, but only on the following configuration:
CentOS (6 or 7 with kernel 2.6.32-042stab108.2) host server with running a CentOS 7 container
running Docker.

The how-to on wiki.openvz.org/Docker_inside_CT works perfectly for my configuration. Except
Docker uses up all inodes REALY fast so I'm still working on an optimal number for that.
