Does this seem normal?

```
# ploop balloon discard --stat /vz/private/305/root.hdd/DiskDescriptor.xml
```

```
Balloon size: 25602MB
```

```
Data size: 38634MB
```

```
Ploop size: 102398MB
```

```
Image size: 75889MB
```

The image size is 75GB even though the actual data size is 38~GB?

This is a big problem mainly because we are utilizing expensive SSD's so any unnecessary used space is costly.
